

## Extracted from the physiologic research “**Influence of drinking water, activated with Revitan attachment, on health condition of people**”

**Research was implemented by: Research organization** NOVE TEHNOLOGIJE D.O.O.  
Research and practice, researcher: dir. Dr. Prof. B Laptev

### **Objective of the research:**

Evaluation of influence of drinking water, activated with Revitan attachment, on health condition of people

### **Included in the research:**

the research was implemented on two groups of relatively healthy people.

First group – control group (24 volunteers). In this group they evaluated the information about the functional condition of health of relatively healthy people who did not use the water activated with Revitan.

The second group (42 volunteers)– a group of relatively healthy people who used Revitan activated water for a period of three months.

### **attachments:**

For activation of drinking water the volunteers used the Revitan attachments. Revitan is a specially designed metal tube that changes the water structure and increases its activity.

### **Course of research:**

1. In the control group (24 volunteers, 21 women and 3 men) they evaluated the information about the functional condition of their health as relatively healthy people (who did not use the activated water), at the beginning of the research (first examination) and after three months. Average age of the volunteers was  $38,6 \pm 2,1$  years.

2. Research of the influence of drinking water, activated with Revitan attachment, was implemented on the second group of people (42 volunteers, 30 women and 12 men), during three months.

Average age of the volunteers was  $40 \pm 1,7$  years - 85 % of which were aged from 25 to 50 years. Minimum age was 23 years, and maximum age 71 years.

The volunteers used the drinking water in the area of Slovenia. Among them 33% were using the water in Ljubljana area, 13% in Ribnica area, 10% in Kočevje and the others in other areas in Slovenia.

The evaluation of health condition of each individual was implemented before the start, after drinking the water once, after 10 days, 1 month and 3 months.

The participation in the physiological research was voluntary. All volunteers were familiar with the instructions for the use of water, that goes through Revitan attachment, and signed a statement that bound them to respect the advice and instructions for the use of water. Every volunteer used the Revitan attachment in their home for the time of research.

### **Attachments and methods for evaluation of functional condition of the organism:**

The evaluation of reactions of the organism was implemented with the following devices:

- apparatus Metatron (ISO 9001: 2000. The certification was carried out by BUREAU VERITAS CERTIFICATION 22.02.2007; Registered in Russian Federation. Registration certificate No. FS 022a2005/2221 from 19<sup>th</sup> August 2005. Product of medicinal technique code ОКР 94 4280).
- apparatus DEKA-Woll (ДЕКА-ФОЛЛЪ – Medico-ecologic center Djuni (Дюны), Rusija), The method is confirmed by the Ministry of Health of Russian Federation [10].
- device for measuring the potential (V) on skin (electrical part of field) of humans ИБП-1, Institute of Introscopy, Russia.
- Device for measuring blood pressure and pulse ibr GmbH, Model H400, Germany.
- Device for measuring arm strength (kg) ДК 100, Russia.

### **Results of the research:**

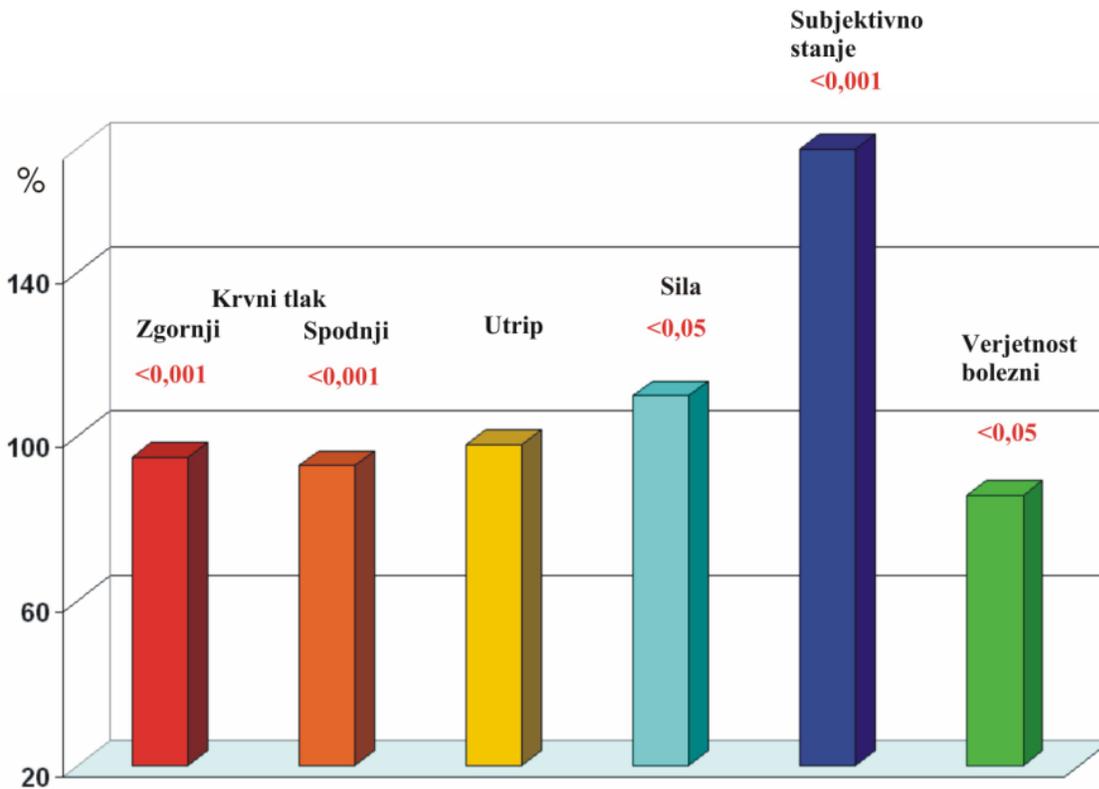

#### **Condition of control group of people:**

The research showed that the subjective condition, dynamics of blood pressure, pulse and arm strength and the parameters of Metatron diagnostics did not reliably change in the control group.

#### **Changes on the second group of volunteers after three months use of activated water (figure below):**

- subjective condition of volunteers improved for 62%;
- average strength in left and right hand increased for 10%;
- upper and bottom blood pressure reduced for 4-7%;
- pulse after 10 days, 1 month and after 3 months of use of “Revitan” water remained unchanged;
- the probability of disease was significantly reduced (30%) - coefficient K in average increased for 30% for head, thorax organs, stomach and blood.

The changes signify the continuation of development of processes for improvement of the condition of the organism and an increase of its reserves.

**Blood pressure      Pulse      Strength      Subjective condition      Probability of disease**  
**Upper      Bottom**

**Figure: Dynamics of blood pressure, pulse, arm strength, subjective condition and probability of disease of the 42 volunteers after 3 months use of “Revitan” water**  
 ( where the value 100 = initial condition before using the Revitan water)

**Conclusion:**

Drinking water, activated with REVITAN attachment, significantly improves the condition of organism and increases its reserves, as the results of the research “Influence of drinking water, activated with Revitan attachment, on health condition of people” showed a positive effect on the subjective condition, reduction of upper and bottom level of blood pressure with unchanged heartbeat and increase of arm strength as well as improvement of general condition of the organism and the condition of individual organs.

The researches in the field of activated water are very perspective, as they can show the way to healing and removal of frustrations and suppression of dysfunctions in the organism in the shortest possible time.
